To calibrate probe-

Cold - fill a cup with ice & water, leave to stand for 10mins, place probe into cup and allow reading to steady, temp should read -1<sup>0</sup>C to +1<sup>0</sup>C, record temp.

Hot – Bring some water to the boil, place probe into water and allow reading to steady, temp should read 99<sup>0</sup>C to 101<sup>0</sup>C, record temp.

If the temperature does not reach the desired range, record in comments, do not use probe, report to manager and get probe replaced.
